

Introducing our smallest, most powerful, and sophisticated Super Power 13 ever!

**Designed
with you in mind**

Oticon Chili was developed in collaboration with real people who know the everyday challenges that come with severe to profound hearing loss. This includes not only people who have hearing loss, but also their families and friends who share with them the everyday challenges of communicating.

Oticon Chili is our newest generation of Super Power hearing instruments. It introduces new approaches in audiology, connectivity, and reliability. It's more than another powerful hearing instrument—it's a new way forward in meeting specific needs for people with severe to profound hearing loss.

It's slim, discreet, and uses a size 13 battery, making it incredibly small. The design even includes quick control features for instant muting, volume adjustment, and program selection. Never before has super power been so sophisticated.

The concepts that make the difference

Speech Guard - Clear Undistorted Speech

Oticon Chili uses Speech Guard, a unique way of amplifying sound. It provides a clear signal, reducing distortion to make it easier to follow conversations.

Effortless Access to Phones, TV, and Audio Devices

Oticon Streamer and ConnectLine™ offer unmatched ability to stay in touch, keep informed, and enjoy entertainment. ConnectLine lets you watch TV through your hearing instruments at your own personal volume. Friends and family can enjoy their own volume level through the TV speakers. If the phone rings, you can easily answer with the touch of a button—you'll hear the ring right in your hearing instruments! When the call ends, you'll switch back automatically to the TV.

Most importantly, everything is easily controlled by you with the small and easy-to-use Streamer.

Streamer

Built to Last - Quality to Rely On

Chili is designed with protection inside and out against moisture, sweat, dirt, and falls. For example:

- Chili uses a 13 size battery, making it a very slim and comfortable instrument to wear.
- Shock absorbent—the unique shock-absorbing attachment of the internal components protects them if the instrument should be dropped or fall.
- Nano-coated—moisture and dirt are kept out by the high tech water repellent coating, and the battery door is designed to keep out moisture and sweat that might trickle down the instrument.
- Internal seal—a permanent coating inside Chili effectively seals the electronic parts, resulting in a water, moisture, and dirt repellent hearing instrument.

Chili is ideal for all super power users who demand 24/7 reliability out of their hearing instruments.

Inconspicuous in every way

Have you ever asked yourself what it would take to try a new set of hearing instruments? It's a big step, and we understand any hesitation.

Chili is an excellent opportunity to do just this. We invite you to experience the audiology and design advancements of Chili as the next step on your journey to better communication.

People First

People First is our promise to empower people to communicate freely, interact naturally and participate actively
